The Computer Science Program of CSU Channel Islands presents:

**Capstone Poster Presentations**

**Thursday, December 3, 4pm-6pm, in Sierra Hall Lobby**

*Refreshments will be served!*

Please join us in supporting CSUCI Computer Science and Information Technology majors as they present the culmination of their capstone work at the **Inaugural Capstone Poster Session**. Capstone project-based courses are valuable ways for students to prepare for careers in their respective industries. Lainez et al. [1] state that capstone projects deliver important skills such as 1) a basic understanding of business processes, 2) a product development with high-quality concerns, 3) know-how to conceive, design, implement and operate medium-size complexity systems and 4) communicative, initiative/leadership teamwork, analytical and problem solving and personal abilities. Capstone projects, as identified in Clarke [4], help increase student confidence and allow students to explore areas of technology not covered in the academic curriculum. This year marks the Computer Science Department’s first biannual poster session and all are welcome to attend.
